

CAPSULE MAGAZINE UNIT WITH A CAPSULE RETAINING MEMBER

ABSTRACT

A capsule magazine unit having a holding device for capsule magazine unit,
5 into which the capsule magazine unit can be releasably inserted, such as of an espresso
machine. The capsule magazine unit can comprise at least one essentially vertical capsule
magazine tube that is suitable for holding capsules of coffee or other beverage or food
forming components stacked one above another and can have a lateral capsule removal
opening at the bottom. A locking ring, which is arranged around the capsule magazine unit,
10 can be displaced essentially vertically with respect to the capsule magazine unit. At least one
locking-ring lifting element on a holding device for holding the capsule magazine unit can be
provided that is suitable for acting on the locking ring.
